Alexandria, Egypt (Open to relocation / remote)
Computer & Network Engineer

Summary

Computer Engineering graduate (AAST), **AWS Certified Solutions Architect – Associate**, and **Cisco CCNA**-trained. Full-stack developer with hands-on experience in REST API development, cloud and serverless systems, and computer networks. Eager to contribute to fast-paced engineering teams.

Education

Arab Academy for Science, Technology & Maritime Transport (AAST) 2021 – 2026
B.Sc. in Computer Engineering *Alexandria, Egypt*

Experience

DXC Technology Apr 2026 – Jul 2026
Software Intern *Egypt*

- Built an **IoT monitoring** website that ingests live sensor data and displays it with configurable thresholds and a notification system for out-of-range readings.
- Worked in an **Agile** team of 5, rotating across front-end and back-end development, front-end and back-end testing, and **DevOps**, with the scrum master role rotating each sprint. Stack: **Angular**, **Spring Boot**, **Docker**, and **Jenkins** (CI/CD).

Egyptian Collegiate Programming Contest (ECPC) June 2024
Network Management *Egypt*

- Configured and managed contest network infrastructure: set up and configured switches, tested connectivity, and inspected devices ahead of the competition.
- Provided on-floor technical support during the live contest, diagnosing and resolving hardware and network issues under time pressure.

Projects

AI-Driven Serverless Image Processing Pipeline *AWS Lambda, S3, API Gateway, Rekognition, DynamoDB*

- Built a fully event-driven, serverless image pipeline on AWS: client uploads via **S3 presigned URLs** (issued by API Gateway + Lambda), triggering automated resizing and **Amazon Rekognition** label detection, with metadata persisted to **DynamoDB**.
- Engineered runtime dependency loading into Lambda's `/tmp` to cut package size and cold-start issues, and resolved S3 **SigV4**/CORS auth failures for secure direct browser uploads.

IoT Monitoring Platform *Angular, Spring Boot, Docker, Jenkins*

- Built a web platform that ingests live sensor data and displays it in real time, with user-configurable thresholds and an automated notification system that alerts on out-of-range readings.
- Delivered in an **Agile** team of 5 with members rotating across front-end, back-end, front-end/back-end testing, and **DevOps**, and the scrum master role rotating each sprint.
- Containerized the services with **Docker** and automated builds and deployment through a **Jenkins** CI/CD pipeline.

ACPC Contest Platform (Graduation Project) *Jersey, Jetty, React, GitLab CI/CD*

- Re-engineered the ACPC contest system with a modern **React** UI on top of **PC**^{2} as the underlying contest engine, preserving the proven judging core while modernizing the user experience.
- As back-end developer, designed and built the **REST APIs** (**Jersey** on **Jetty**) bridging the new UI to PC^2, added structured logging, and validated every endpoint with **Postman**.
- Integrated continuously with the front-end team and set up a **GitLab** CI/CD pipeline for automated builds and deployment.

Certifications

AWS Certified Solutions Architect – Associate – Amazon Web Services, 2026.
Cisco CCNA Training – WE, 120 hours.

Technical Skills

Networking – Network management, monitoring & troubleshooting, routing/switching fundamentals (Cisco CCNA), sysadmin.
Cloud & DevOps – AWS (Lambda, S3, API Gateway, DynamoDB, Rekognition); Docker, Jenkins, GitLab CI/CD; serverless architecture.
Full-Stack & Web – React, Angular, MERN, Spring Boot; REST APIs (Jersey/Jetty); front-end & back-end dev.
Databases – Relational design, SQL, complex queries, data integrity.
Programming – Java, C#, Python; OOP; API testing (Postman), logging.
Languages – Arabic (Native), English (Fluent), German (Intermediate).
